Abstract (en)

This application for an industrial patent concerns a transportation system, made up of a series of single or multiple rests intended to transport persons or things, set in motion by means of underground carriages, for use in urban or other environments. These rests are above the surface at a suitable height while the carriages to which they are fixed by means of a vertical rod are below ground level, held inside a guiding track along which they run and set in motion by any means of propulsion involving a moving cable or belt to which said carriages are permanently or temporarily linked.
