Abstract (en)  
[origin: WO8705579A1] The device converts the bags into baskets, particularly refuse baskets and may support other objects and accessories. The device comprises three supports: the vertical frame (1, 3, 2), the base (15, 14, 13, 12, 11, 10), and the two pivoting rods (4, 5, 6, 7, 8, 9). The vertical frame and the base are joined by the axis (6, 7) of the two pivoting rods. The vertical frame is locked with the base by means of hooks (10) et (15) of the base and the two rods (4, 5, 6) and (9, 8, 7) pivot between the two. The bag is laid having one side supported by the vertical top where the angle (3) passes through the handle of the bag and a portion of the wall covers the rounded sides (42) and (43). The opposite side of the bag is supported by the means at the extremities of the two pivoting rods at (4) and at (9). The device may be suspended by its angle (3) and the base may be unlocked to let long bags pass through. The vertical frame may have along its two arms a plurality of supporting means to support more twin supporting rods which will carry other bags and/or horizontal supports as that of the base to sustain tissues boxes, etc. and these supports may be mounted on one and/or both sides of the vertical frame which will then have one base on either side. One clearing device (51) has been added in fig. 2, positioned by its support (50, 49) at the opening of the bag in order to remove what remains in the dishes, etc.. The device according to the invention is particularly intended to convert bags of various sizes into refuse baskets with the possibility of carrying a plurality of bags at a time and/or other objects and may be used for various purposes.
