Abstract (en)

[origin: EP0259561A2] The bit comprises a shaped body (100) with a resiliently flexible, bendable crosspiece (10), the bending area or bending zone of which is bounded on both sides of the crosspiece by bead-like material accumulations (11, 111), the sections (20, 120) of the shaped body adjoining the bead-like material accumulations (11, 111) bounding the length of the crosspiece having a greater flexural rigidity than the crosspiece (10), so that the crosspiece (10) has a high flexural deformation in comparison with the sections (20, 120) of the shaped body adjoining it, the area of deformation being defined by the lateral material accumulations (20, 120). <IMAGE>
