Abstract (en)

[origin: US4782750A] A machine for printing oval objects. The oval object has imparted to it a simple pivoting movement about an axis which is separate from the center of the radius of curvature of a section of the area of the object to be screenprinted upon. The printing screen which is attached to a printing or a screen support is moveable to correct simultaneously the distance between the screen and the rotation axis of the object. The printing machine is applicable to processes for decorating convex surfaces by screen printing, hot pressing, and dry offset printing.
