Abstract (en)
[origin: EP0260200A1] The present invention relates to a body for railway carriages comprising, at floor level, two longitudinal profiles (110), at roof level, two other longitudinal profiles (310), floor, roof and side walls, each consisting of panels (100, 200, 300), characterised in that these panels are formed from at least one network of the honeycomb type and from various frame profiles, some of these frame profiles being fixed directly onto the longitudinal profiles (110, 310), the assembly consisting of profiles and panels forming a working structure. Application to all railway carriages.
