Abstract (en)

A lock of the type using a card as an unlocking element, where the card is not physically actuating over the movable elements of the lock, but the card just establishes a code which will free the lock elements, while their operation is carried out by a knob alien to the unlocking elements. This knob can be extremely rugged and it allows the use of very weak cards. A card reader belonging to the above mentioned technique is used, and the lock is made of four rectangular sheets which define three flat parallel spaces where the different parts which rock or slide over holes or slots are located, within the sheets, with the aid of spindles, pins and rivets.
