Abstract (en)

A machine for cleaning clothes or fabrics, using solvent liquids, provided, for the cleaning, drying and solvent liquid regeneration phases, with a heat pump supplying heat to the heat transfer medium of one column (26) and cooling the heat transfer medium of two other columns (25,25')- For a precise temperature adjustment the heat transfer medium can be further heated with an additional electrical immersion heater (33) In order to reach the lowest possible temperature, necessary for the drying process, the cold heat transfer medium can remain temporarily stationary in one of the two cooled column (25').
