Abstract (en)

[origin: EP0260436A2] The closing device for swivel lids (1), which are actuated by remote control via a linkage (2), has a control lever (11) as a constituent of the linkage (2), which lever on the one hand produces the swivel movement of the lid (1) and, on the other hand, controls the actuation of a locking hook (19). The actuation of the control lever (11) is advantageously effected via a lever triangle (8), on which the actuator (3) acts, and which transmits the actuation path of the actuator (3). After locking of the locking hook (19), the control lever (11) assumes an above dead centre position. <IMAGE>
