Abstract (en)

[origin: EP0260492A2] There is disclosed an automatic printing plate-tightening device for use with a sheet-fed printing machine. A first cam shaft (1) extends from the front portion of a plate cylinder. A second cam shaft (4) extends from the rear portion of the cylinder (21). Two arms (2, 5) are rotatably mounted on the first and the second cam shafts, respectively. A first cylinder (7) can be connected with one or the other of the two arms to rotate it. The orientation of the first cylinder is switched between two positions by a second cylinder (12) which is connected to the first cylinder.
