Abstract (en)

[origin: EP0260493A2] The cover (9) of the receptacle (2) comprises a frame (9a) having a circumferential collar (9b). The collar (9b) fits around a neck part of the receptacle which delimits the receptacle opening (6). Articulated on the rear frame part by means of a hinge (11a) is a vertically swivellable cover flap (11). The cover flap (11) provided with an edge seal (11b) seals off the frame opening, which is approximately in line with the receptacle opening (6). The frame (9a) together with the collar (9b) and cover flap (11) forms a unit which can be removed as a whole in the open position of the receptacle or with the receptacle separated from the furniture. For filling the receptacle or a sweepings bag in the open position of the receptacle, it is sufficient to raise the cover flap (11). The frame (9a) with the collar (9b) can at the same time serve as a bag holder. <IMAGE>
