Abstract (en)

[origin: US4798371A] A chucking device, in particular a vise having two chuck jaws at least one of which is embodied in two parts in the longitudinal direction. A rail guide is present between the two parts, and one of the parts, serving as a pedestal part is joined to the supporting elements of the chucking device, while the other part can be removed and replaced via the rail guide, and the rail guide simultaneously acts as a means of coupling the two parts in the direction in which the chucking force is applied.
