Abstract (en)

[origin: US4821994A] A molding for the retention of a tie during the concreting of a precast concrete part is provided. In the removal of the molding from the recess of the precast concrete part, the molding is drawn off from the tie, so that the tie head projects into a recess in the precast concrete part. So that it can be pulled out of the precast concrete part easily, the molding has at least one lifting-out part which is preferably in the form of a rope loop and which, on the lifting-out side facing away from the precast concrete part, can be bent into the plane of the lifting-out side or raised outward in order to pull out the molding.
