Abstract (en)
[origin: EP0262442A2] The invention relates to a device for sorting sheet metal blanks at sheet metal shears and, to make sorting simpler, proposes that at the cutting point (bottom shear blade 2, top shear blade 8), a slide (14) which can be shifted in relation to this be provided from which the cropped sheet metal blanks slide off close to the cutting point and that in the position remote from the cutting point the slide (14) has a distance from the cutting point (bottom shear blade 2, top shear blade 8) which is greater than the cutting width of the cropped sheet metal blank. <IMAGE>
