Abstract (en)

[origin: EP0263024A2] Device for removing an elongated prestressed- or reinforced-concrete product from a fixed mould, comprising at least one hydraulic actuator arranged beneath the mould, and a hydraulic lifting suction device mounted on a lifting and handling apparatus. This device comprises, integral with the lifting apparatus, two horizontal bars (13) arranged above the product (16) and transversely thereto, immobilised with respect to the prestressing bed (1) and at a height determined by the product, in order to limit the upward travel of the actuator (10). <IMAGE>
