Abstract (en)

[origin: EP0263465A2] 1. Assembly of a frame provided with roller shutter guiding devices and having an associated blind box 2.1. If frames (11) with roller shutter guiding devices (114, 116) are already provided with the blind box (31) in the manufacturing operation, transport to the site of installation proves problematic. Putting together the frame (11) and the blind box (31) at the site of installation in a conventional manner is at least time-consuming, especially since the blind box (31) cannot be mounted as a whole. 2.2. Assembly of the frame (11) with roller shutter guiding devices (114, 116) is facilitated in that the bottom board (311) of the blind box (31) is joined directly or indirectly with the upper frame piece (213) of the frame (11) by means of coupling elements (211, 312) which extend at the front over the region between the roller shutter guiding devices (114, 116) and, at a distance therefrom, over the length of the upper frame piece (116). 2.3. The screwless connection (211, 312) of the complete blind box (31) with the frame (11) is both time- and personnel-saving. <IMAGE>
