Abstract (en)

[origin: EP0263520A2] The softener-containing detergents contain, besides the customary detergent ingredients, 0 to 10% by weight of a quaternary ammonium compound and 1 to 30% by weight of a softener system consisting of 10 to 90% by weight of an alkylamine and 90 to 10% by weight of a crystalline sheet silicate of the formula $\text{Me}_2\text{Si}_x\text{O}_{2x+1} \& Y \text{H}_2\text{O}$ where Me is an alkali metal ion or a proton, x is a number below 7, preferably from 1.5 to 4, in particular 2, and y is a number below 7 x, in particular below 2x. The alkylamine is in this case adsorbed onto the alkali metal silicate. The alkylamines adsorbed onto the silicate display, together with the quaternary ammonium compounds, a softening effect in the detergent but, on the other hand, are compatible with anionic surfactants in the detergent.
