Abstract (en)
[origin: EP0263722A2] A casing guide apparatus includes a subsea well template 12 having a well opening (44) defined therein, and a cylindrical well casing (32) received through the well opening. A casing guide bushing (68) is operably associated with the template (12) and the casing (32) for permitting relative vertical movement between the template and the casing and for preventing relative lateral movement between the template and the casing at the well opening.
