Abstract (en)

[origin: EP0264344A2] The suitcase with handle, especially for air travel, consists of two linked halves (11,12) one of which has wheels along its base. The wheels consist of a castor (21) in the shape of a handle. A side section (30) protrudes from one suitcase half (12) at a distance (i) from the topside (27) facing the bottom side (28) and parallel to it. The sides (26) widen out towards the base of the suitcase (10) by the width (a) of the side section. The side-section together with the sides and the base forms, with an outer side (31) a suitcase-compartment (33). Attachments detachably fix a document-case (50) which extends the suitcase to form a square.
