Abstract (en)

[origin: US4886708A] A process for the manufacturing of plastisol based synthetic coverings (e.g. floor or wall coverings) having improved resistance to soiling; and the product produced from the process is presented. The synthetic covering utilizes a wear layer formed from a mixture comprising at least one silicone polymer and a cross-linking agent. Preferably, this mixture also includes a catalyst. The mixture is deposited onto a conventional support as a wear layer. The silicone polymer is then cross-linked and the wear layer undergoes pre-gelling and gelling.

Abstract (fr)

L'invention se rapporte à la fabrication de revêtements de sol ou de mur à base de plastisol présentant une résistance améliorée à la salissure. Selon l'invention, on dépose sur un support décoratif, à titre de couche d'usure, un mélange de plastisol contenant au moins un polymère de silicone, un agent de réticulation et éventuellement un catalyseur et on effectue la réticulation du polymère de silicone, la pré-gélification et la gélification de la couche d'usure.
