Abstract (en)
[origin: EP0264707A2] The fastening device for the hidden securing of cladding panels (8), having a wall-side angle piece (16) with an upwardly directed limb (15) and having an approximately U-shaped cladding-side fastening piece (1), into the gap (4) between the limbs (2,3) of which the upwardly directed limb (15) of the angle piece (16) engages, it being possible to connect the cladding-side limb (3) of the U-shaped fastening piece (1) to the cladding panel (8), can be manufactured more simply and used for various applications without further machining if the U-shaped fastening piece (1) is formed from a punched flat material, the edge pieces (5,6) of which are folded and together form the wall-side limb (2), and if the cladding-side limb (3) is formed substantially by the non-folded middle piece (7). <IMAGE>
