Abstract (en)

[origin: EP0264788A2] A one-surface light-sensitive silver halide photographic material having, on a support, at least one of green sensitive layer, characterized in that the relative blue light sensitivity of the light-sensitive photographic material is controlled to be 45 or less to the green light sensitivity which is made as 100. According to the present invention, a one-surface light-sensitive material with high sensitivity and yet excellent graininess, and also with little dye remained after development can be obtained.
