Abstract (en)

[origin: EP0265339A1] Useable for connecting connectors the block is formed by a strip folded over on itself at its middle, comprising a central zone (14) forming a connecting area and lugs (16, 16a) projecting on each side of the central zone distributed at regular intervals and bent in such a way that two lugs which are symmetrical with respect to the central zone constitute a female terminal. At least one of the lugs has at least one finger cut out and folded over towards the inside in order to immobilize a male terminal inserted into the female terminal. <IMAGE>
