Abstract (en)

[origin: EP0265567A1] 1. Telescopic capsule for tubes or flasks, comprising a telescopic tube (35) closed by a top or plate (36), with lateral aperture (37) for the passage, in the opening position, of a product contained in the tube or bottle, characterized in that said telescopic tube (35) is sliding in an envelope (38) which can be connected to the tube or bottle and fixed with an operating push piece (42) movable with respect to a guide (43) and is provided with at least one abutment (46) cooperating with at least one abutment (45) on the envelope (38) to prevent ejection of said telescopic tube, said telescopic tube (35) forming inside a square shaped duct (37) laterally opening in said aperture (37) and in a tubular nipple (40) supported by a transverse wall (39) of the envelope (38) with respect to which the telescopic tube (35) can slide.
