Abstract (en)
[origin: EP0266607A1] Such a pressure equalizing system is arranged in the spacer (5) of the multi-pane system (6, 7), comprising a first hollow element (1) which is closed on one side towards the pane gap (10) and in which a second, inner hollow element (2) which is open on both sides and consists of a material having a higher softening temperature than that of the first hollow element (1) is inserted, the hollow element (1) having a widened portion (9) serving as a stop at its end facing the outside of the multi-pane glazing and the hollow element (1) being sealed off with respect to the spacer (5) by means of a seal (4) (water vapour diffusion barrier).
