Abstract (en)

[origin: EP0267357A1] Coils (C) of tape-like raw material are stored in a magazine station (M) in a horizontal position, that is to say with a vertical axis. They rest on a plane base, by means of which they can be grasped in a still horizontal position and be fed to an unwinding station (H), where they are put down horizontally together with the base and unwound, in order to feed the tape-like raw material to a processing station (B). <IMAGE>
