Abstract (en)

[origin: EP0267413A2] 1. Sloping elevator (7), in particular elevator for materials or passengers, having a plurality of telescope runners which form guide rails (rails 1-6) for a slide (9) bearing a load-carrying means (8) which is displaceable on said rails, said slide being guided by means of top rollers (10) and bottom rollers (11) on the rail profile (13, 13'), an adjustment device (16, 14) which changes the roller distance when passing from one telescope runner to the next, being arranged on the slide, characterized in that the adjustment device is a forced adjustment device constructed, on the one hand, on the slide (9) and, on the other hand, on at least one part of the rails (1-6), by means of which forced adjustment device the roller distance (a, a') between the top roller (10) and the bottom roller (11) can be adjusted by force.
