Abstract (en)  
[origin: EP0267546A2] The apparatus comprises a treatment bench which is designed at least partially as a vibrational support, with vibration-generating arrangements engaging on the vibrational support in such a way that the vibrational support is incited to execute three-dimensional vibrations. In order to produce defined, therapeutically effective vibrations, it is provided that the vibration-generating arrangements (9, 10) be driven simultaneously and at a constant frequency ratio. <IMAGE>
