Abstract (en)

A silver halide color photographic material comprising a support having thereon a red-sensitive silver halide emulsion layer containing a cyan coupler, a green-sensitive silver halide emulsion layer containing a magenta coupler, a blue -sensitive silver halide emulsion layer containing a yellow coupler, at least one of said light-sensitive silver halide emulsion layers containing a 2-equivalent coupler; and at least one light-insensitive layer containing at least one compound selected from the group consisting of compounds represented by formula (I), bis- and tris compounds and polymers derived therefrom, and an alkali-labile precursor thereof: <CHEM> wherein R1 and R2 each represents a hydrogen atom, a halogen atom, -SO3M, -COOM (wherein M represents H, alkali metal atom or -NH4), an alkyl group, an acylamino group, an alkoxy group, an aryloxy group, an alkylthio group, an arylthio group, a sulfonyl group, an acyl group, a carbamoyl group or a sulfamoyl group, R1 and R2 may be linked to form a ring; X represents -CO- or -SO2-; R3 represents an alkyl group, an aryl group, a heterocyclic group, a cycloalkyl group, an alkoxy group, an aryloxy group, or an amino group; at least one of R1, R2 and R3 may be a 2-valence group to form a bis- or tris-compound or a polymer; and the sum of the carbon atoms contained in R1, R2 and R3 is at least 10. The photographic material has superior sensitivity, sharpness, contrast and grain characteristics, and exhibits low color staining and color fog.
