Abstract (en)

[origin: EP0268908A1] 1. Retention-securing device in combination with roll support frames (6), which support the upper strip run in strip stores and which are bringable by the strip-deflecting carriage (2), which is moving below these, out of a rest setting into an operative setting and back through a pivotal movement by means of roller cam guides (8) and fixable in both settings by a pivotation unlocking and locking device, characterised by abutment elements (9), which are arranged at the roll support frames (6) in the path of movement of guide strips (10) connected fixedly with the strip-deflecting carriage (2) and which are loadable by the guide strips (10) one after the other at the spacing of the path of pivotal movement of the roll support frames (6), which is determined by the roller cam guides (8), and retaining devices (12), which are arranged in direction of the path of pivotal movement behind the rest setting of the roll support frames, seize these roll support frames (6) and fix them in a setting of firm retention.
