Abstract (en)

[origin: EP0268977A1] In an apparatus in which a part of, for example, a metal strip (6) can be coated, the part of the metal strip (6) rests against the circumference of a wheel (2) of insulating material which is not immersed in the electrolyte. In this region, it is partly covered by a strip (11) of insulating material. The electrolyte is sprayed under pressure onto the uncovered points by means of a spraying device (12) situated outside the electrolyte. The wheel (2) can be adjusted in the radial direction approximately at right angles to the strip (11) resting against the metal strip (6).
