Abstract (en)

[origin: EP0269004A1] A device for attaching a step iron to a curved, in particular thin, wall (36) comprises two tabs which can be mounted on the wall (36) and a sleeve (26) on each tab for receiving the end of a leg (16) of the step iron. Each sleeve (26) is connected to the tab by means of a hinge (30, 32) having a vertical pivot axis, so that problem-free matching to different wall curvatures is possible. <IMAGE>
