Abstract (en)

In order to render framing for panelling, especially for a window pane (19), easier to fix and yet more secure we provide first (9) and second (3) extrusion members arranged to embrace opposite sides of support means (1) for the frame, and provide mutually engagable keying means (23) between the extrusion members to allow interconnection in one direction but to resist separation in the other direction. The keying means conveniently takes the form of barb like projection and recess means.
