Abstract (en)

[origin: EP0269473A1] This device for locking a hook (4) mounted pivotably on the free edge of a door (B) and interacting with retention means (8) fixed to the frame part comprises, on the said frame part (1), a sliding bolt (11) which is designed to interact with a keeper (9) formed on the hook (4) and which is stressed elastically into the locking position, this bolt having a rigid extension (16) at least partially surrounding the hook (4) in its catch position and an elastically shiftable stop (19) for retaining the said extension (16) in the retracted position. <IMAGE>
