Abstract (en)

[origin: EP0269486A1] The element is formed from the combination of longitudinal elements (2) and transversal elements (4) together defining open cells (6) arranged in rows of longitudinal cells and transversal cells which are substantially aligned. The cells of the same transversal row lie in the same plane, whereas the cells of the same longitudinal row lie in different planes, or conversely. In particular, the longitudinal elements (2) have a stepped form. This element enables cornices or pipework lying below ceilings to be concealed. <IMAGE>
