Abstract (en)
[origin: EP0269938A2] The present invention relates to a container particularly for small-size food products, comprising a single wooden sheet (2) with preset cutting lines (28, 29, 30, 31) and folding lines (3, 4, 5, 6) which define a substantially rectangular base portion (7) and at least four polygonally shaped lateral portions (8, 9, 10, 11), each having one side coinciding with a side of the base portion (7). Two counterposed lateral portions (9, 11) are provided proximate to their ends next to the remaining lateral portions (8, 10) with foldable tabs (12, 13, 14, 15), which are superimposable and rigidly associable with the outer face of the contiguous lateral portion (8, 10), with the lateral portions (8, 9, 10, 11) folded above the base portion (7). Reinforcement means (32) are furthermore provided in the container at those folding lines (4, 6) which extend substantially parallel to the fibers of the wood which constitutes said sheet (2).
