Abstract (en)

A vehicle speed control system comprising an automatic speed control system for controlling a vehicle velocity of the vehicle to a setting vehicle velocity which is set by driver of the vehicle and an automatic transmission control system for controlling a speed stage of an automatic transmission of the vehicle by using a deviation between the present vehicle velocity and the setting vehicle velocity of the automatic speed control means.

The automatic transmission control system comprising two mode that are a mode at the time the automatic speed control system is controlling the vehicle velocity and a mode at the time the automatic speed control system is not controlling the vehicle velocity, and the automatic transmission control system delay the change of the mode at the shifting of the speed stage. The automatic transmission control system prohibit the shift of the speed stage to fixed speed stage at the time the automatic speed control system is controlling the vehicle velocity. The automatic speed control system does not execute the judgement of the shift of the speed stage at the time that the automatic speed control system is controlling the throttle valve at shifting of the speed stage. The automatic speed control system controls a throttle valve according to the abnormal state of the transmission.
