Abstract (en)

[origin: EP0270078A2] A silver halide color photographic material is described, comprising a reflective support composed of a vinyl chloride resin containing a white pigment and having thereon in an appropriate order at least one red-sensitive silver halide emulsion layer containing a cyan color forming coupler represented by the general formula (1) or (2) shown below, at least one green-sensitive silver halide emulsion layer containing a magenta color forming coupler represented by the general formula (3) or (4) shown below, and at least one blue-sensitive silver halide emulsion layer containing a yellow color forming coupler represented by the general formula (5) shown below <CHEM> <CHEM> wherein R1, R4 and R5 each represents an aliphatic group, an aromatic group, a heterocyclic group, an aromatic amino group or a heterocyclic amino group; R2 represents an aliphatic group; R3 and R6 each represents a hydrogen atom, a halogen atom, an aliphatic group, an aliphatic oxy group or an acylamino group; R7 and R8 each represents a substituted or unsubstituted phenyl group; R9 represents a hydrogen atom or a substituent; R2 and R3 or R5 and R6 may be connected with each other to form a 5-membered to 7-membered ring; Q represents a substituted or unsubstituted N-phenylcarbamoyl group; Za and Zb, which may be the same or different, each represents a group of -CH=, a group of <CHEM> or a group of -N=; R10 represents the same substituent as that represented by R9; and X1, X2, X3, X4 and X5 each represents a hydrogen atom or a group capable of being released upon a reaction with an oxidation product of an aromatic primary amine developing agent. The silver halide color photographic material provides a color photographic print having color images of excellent sharpness and good smoothness. A color photographic print comprising a reflective support composed of a vinyl chloride resin containing a white pigment and having thereon in an appropriate order at least one emulsion layer containing a cyan dye obtained by a reaction of a cyan color forming coupler represented by the general formula (1) or (2) shown above with an oxidation product of an aromatic primary amine developing agent (CD), at least one emulsion layer containing a magenta dye obtained by a reaction of a magenta color forming coupler represented by the general formula (3) or (4) shown above with a CD, and at least one emulsion layer containing a yellow dye obtained by a reaction of a yellow color forming coupler represented by the general formula (5) shown above with a CD is also described.
