Abstract (en)

[origin: EP0271106A2] In a locking device for lifting doors 2, 18 of motor vehicles, especially passenger cars, which assume an essentially vertical position, at least when closed, and which are vertically displaceable, in the two lateral door regions are arranged fork latches 9, 10 which interact with mutually superposed closing bolts 5 to 8 for the closed position and the open position of the lifting door 2, 18, so that the lifting door can be held securely on the two door sides both in the closed position and in the open position. <IMAGE>
