Abstract (en)
[origin: US4802779A] Keyboard comprising a handle (8,9) intended to prevent an elongate key (4) from being depressed obliquely. In order to simplify the operation of assembling/disassembling the key, the latter comprises an inclined surface (2) and the handle is fixed to the chassis (13) by means of a hook (1) of high elasticity, which permits the handle to be positioned in a slot (3) of the key when the latter is depressed.
