Abstract (en)
The further end of the body (2) of a vice is provided with toothed concave surfaces (16,18), and the slide (6) has an aperture (26) with a toothed concave edge (28) by means of which a pipe or rod may be gripped vertically. The vice may be rotatable so as to project over the edge of a work bench to allow long objects to be gripped. The guide screw (10) preferably has a substantial collar or nut (46) retaining it within the slide and secured to the guide screw by means of a cotterpin or set screw (48), and the jaws may be made reversible and may be designed to grip objects internally.
