Abstract (en)
[origin: EP0272375A2] A Florentine blind contains two slides which extend on vertical guide rails (5) and which carry a deflecting roller for the Florentine cloth and two drop arms. The drop arms are connected to one another at their outer ends by means of a drop rod, to which the Florentine cloth is attached at the front edge. The Florentine cloth can be wound onto a fixedly mounted winding shaft. To obtain as filigree a design as possible of the guide rails (5) which are to be cut to length without further dressing from standard lengths, there are wall holders (8) which engage through a continuous longitudinal slot (7) into a cavity (6) in the guide rails (5) and which are clamped there. <IMAGE>
