Abstract (en)
[origin: US4802600A] A freight container for air transport has a support frame which is arranged on a baseplate, sections rising from the baseplate and transverse sections, connecting these, for a container roof, sheeting which at least partially fills in the support frame. One side of the freight container is provided with a loading opening, immediately adjoining the lateral loading opening, there is a gap in the container roof and this gap can be closed by a pivotable or displaceable portion of the container roof.
