Abstract (en)

[origin: US4856270A] An automated thread processing system is characterized by reducing thread package handling and labor requirements. The system includes a textile thread processing machine station having a plurality of spindle assemblies for processing thread and forming wound packages of thread. At least one additional station is also provided. A thread package transporting mechanism includes a stationary continuous rail passing through the thread processing machine station and to and through the additional station and back to the thread processing machine station. Thread package carrying devices are movably mounted on the rail and positioned for receiving the wound packages of thread doffed from the spindle assemblies of the thread processing machine station and then carrying the thread packages from the thread processing machine station to the additional station and releasing the thread packages at the additional station and then returning to the thread processing machine station. Drive mechanisms are provided for driving the thread package carrying devices along the rail.

Abstract (de)

Eine Einrichtung für den Abtransport von Spulen aus Vielstellenspinn- und Vielstellenzwinnmaschinen, die zwei im Abstand voneinander angeordnete Spindelreihen aufweisen, zwischen denen in der Maschinenmitte eine in Maschinenlängsrichtung verfahrbare Transporteinrichtung angeordnet ist, an die die Spulen automatisch oder von Hand übergeben werden, ist dadurch gekennzeichnet, daß die Transporteinrichtung über das Maschinenende hinaus zu einer weiterverarbeitenden Maschine oder einer Packerei geführt ist.
