Abstract (en)
[origin: EP0274670A2] In an operating arrangement for a telecommunications unit having a plurality of modes, particularly for a radio set with a cassette player, a plurality of keys being provided with a plurality of functions associated with the modes, characters are applied onto rotatable discs which are associated with the keys, the characters relating to the functions of the respective key. The discs are coupled to a switching element which switches the functions of the keys, and a cover plate with sight glasses is provided which releases the characters of the respectively selected function. A key is preferably produced as one piece and on the same axis as the associated rotatable disc. <IMAGE>
