Abstract (en)  
1. A heat exchanger module of fired ceramic material produced from a stack (a, a') of punched and laminated green ceramic cards, wherein the cards have first cut-outs (1) which, in stacked cards, form through channels (12) and have second cut-outs (2, 4, 7, 8) which are positioned around the first cut-outs (1) in such a manner that, in stacked cards, the second cut-outs (2, 4, 7, 8) of adjacent cards partially mutually overlap, channels (13) being formed which extend perpendicular to the through channels (12) and surround the latter.
