Abstract (en)

To induce pedestrians to cross a pedestrian crossing (4) in one-way flows not liable to interfere with each other, the roadway surface markings (9) indicating the crossing are arranged and shaped such as to suggest and indicate appropriate separate one-way lanes (15, 16) for segregating opposite pedestrian traffic; preferably said markings are series transverse to the roadway of chevrons pointed (10, 11) in the appropriate directions. Along those portions of the lateral edges of the crossing (4) which face oncoming vehicular traffic (2, 3) there are provided stop-line surface markings (5, 6).
