Abstract (en)

This invention relates to a kit of pens, pencils and similar writing instruments housed in a rigid casing equipped with retained devices having two operation positions, wherein said casing (10) consists of two rigid half-shells defining a plurality of ports (14) to introduce pens (11) into its front side and includes a first transverse bridge member (16) having a plurality of rearwardly enlarged through holes; a second transverse bridge member (17) having a plurality of inner recesses; a plurality of stud tailed sleeves (19), the stud tails (20 of which are slidably but not withdrawably extended in the inner recesses of said second transverse bridge member; a compression coil spring (21) acting between said first transverse bridge member (16) and said sleeves (19); as well as a plurality of retainer devices (18) cooperating with the stud tails (20) of said sleeves (19) and operated by pressure forces exerted upon said sleeves so as to move from a retracted position to a withdrawal position and vice versa; the pens of said kit being frictionally engaged in said stud tailed sleeves (19).
