Abstract (en)

[origin: EP0275120A2] An electronic cash register having greater cashier security is disclosed which uses both an assigned cashier code and a secret code, known only to the cashier, to gain access to use of said cash register for registering transactions. The assigned cashier code serves to identify the cashier using the electronic cash register, while the secret code prevents use of the electronic cash register by someone other than the assigned cashier who has access to the assigned cashier code.
