Abstract (en)
[origin: EP0423518A1] Panel interlocking means for securing together a pair of panels in overlapping relationship includes a locking tab (T) struck from one of the panels and arranged to be driven through a locking aperture struck from the other panel. The opposed lateral edges (E1,E2) of the locking tab have deformable marginal portions formed by cut lines (C1,C2) which comprise angularly related portions (P1,P2) of which one portion (P) meets its associated lateral edge of the locking tab at an angle of substantially 90 degrees.
