Abstract (en)
[origin: US4845924A] In the production of packs for stacks (10) of paper handkerchiefs, the problem is to give the cuboid pack an exact shape. Whe a stack of paper handkerchiefs is pushed into a pocket (13) of a folding turret (12), the stack (10) is compressed by a press plate (22) movable up and down in the peripheral direction of the folding turret (12) and, in this compressed form, is pushed into the pocket (13) together with a blank (11). On the opposite side of the folding turret, the virtually finished pack is pushed in the radial direction out of the pocket (13) and onto a push-out platform (48) which moves up and down along the periphery of the folding turret and which is temporarily, in particular during the reception of the pack, in synchronism with the folding turret (12). During a standstill phase of the push-out platform, the pack is transferred from the latter to a discharge conveyor (49).
